COMPUTER SCIENCE

lec.1 notes

# Statistics

“**STATISTICS** IS THE SCIENCE OF  
COLLECTING ,ORGANIZING PRESENTING,  
ANALYZING,AND INTERPRETING  
NUMERICAL DATA”

---

“**STATISTICS** IS A WAY TO GET  
INFORMATION FROM DATA.”

# BEFORE TRYING ANYTHING, YOU SHOULD KNOW YOUR DATA!

# COURSE CONTENT

**“STATISTICS IS THE SCIENCE OF COLLECTING  
,ORGANIZING PRESENTING,ANALYZING,AND  
INTERPRETING NUMERICAL DATA”**

---

Data Presentation

Data Collection

Statistics

Data Analysis

Data Interpretation

# Probability Vs. Statistics

**Probability**: we are given description of causes & we are trying to predict data / future events

**Statistics**: we are given data & we are trying to infer possible causes

**Probability is used to make inferences** from samples to populations

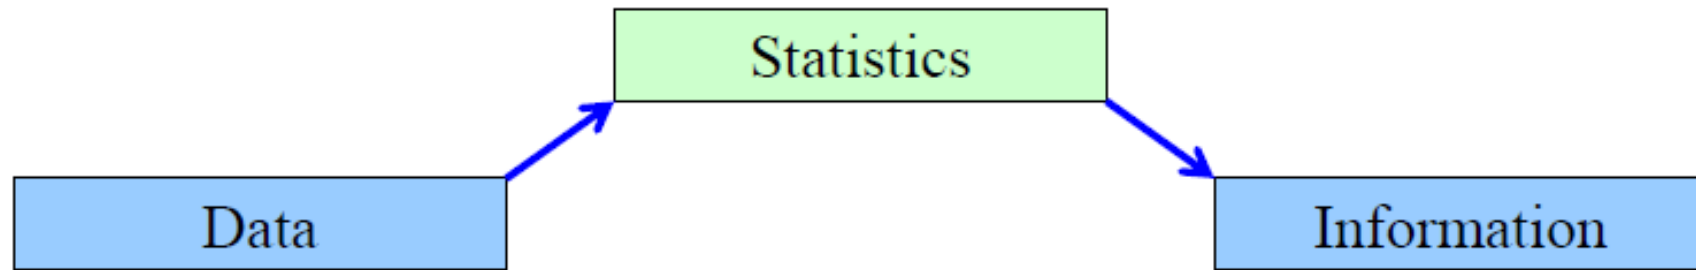

**Inferential Statistics uses Probability:**

The chance of an event occurring

A measure of the likelihood that an event in the future will happen

“Statistics is a way to get information from data”

**Data:** Facts, especially numerical facts, collected together for reference or information.

**Information:** Knowledge communicated concerning some particular fact.

Statistics is a *tool* for creating *new understanding* from a set of numbers.

# Statistics

**Descriptive  
statistics**

Set of procedures for  
organizing and  
summarizing information

**Inferential  
statistics**

Generalizations and  
extract conclusions about  
population

## Statistical Terms

### Variable

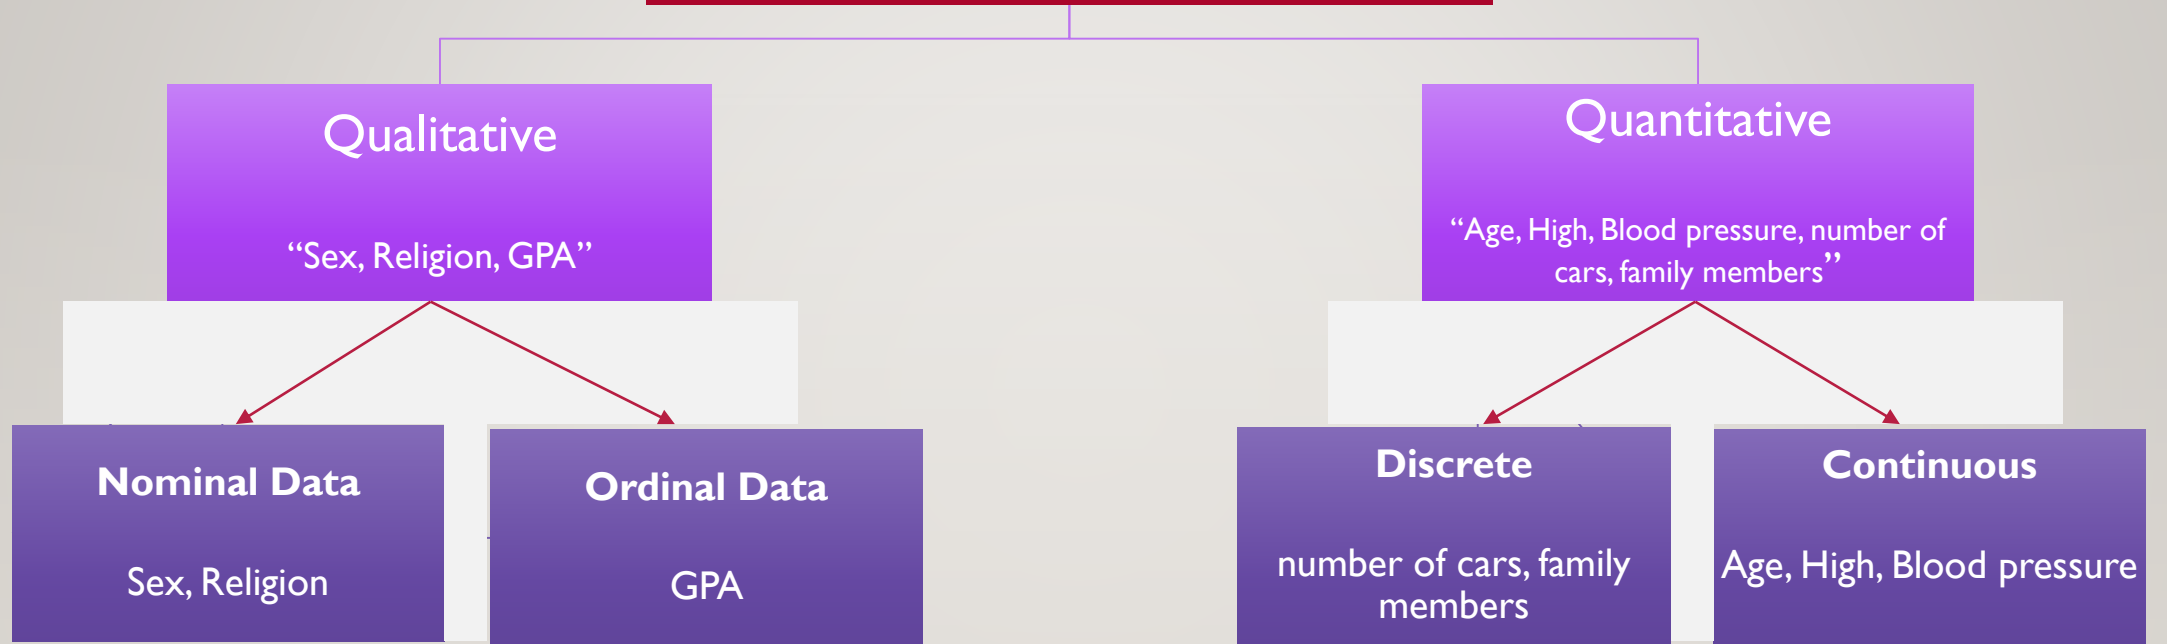

A variable is a feature characteristic of any member of a population differing in quality or quantity from another member.

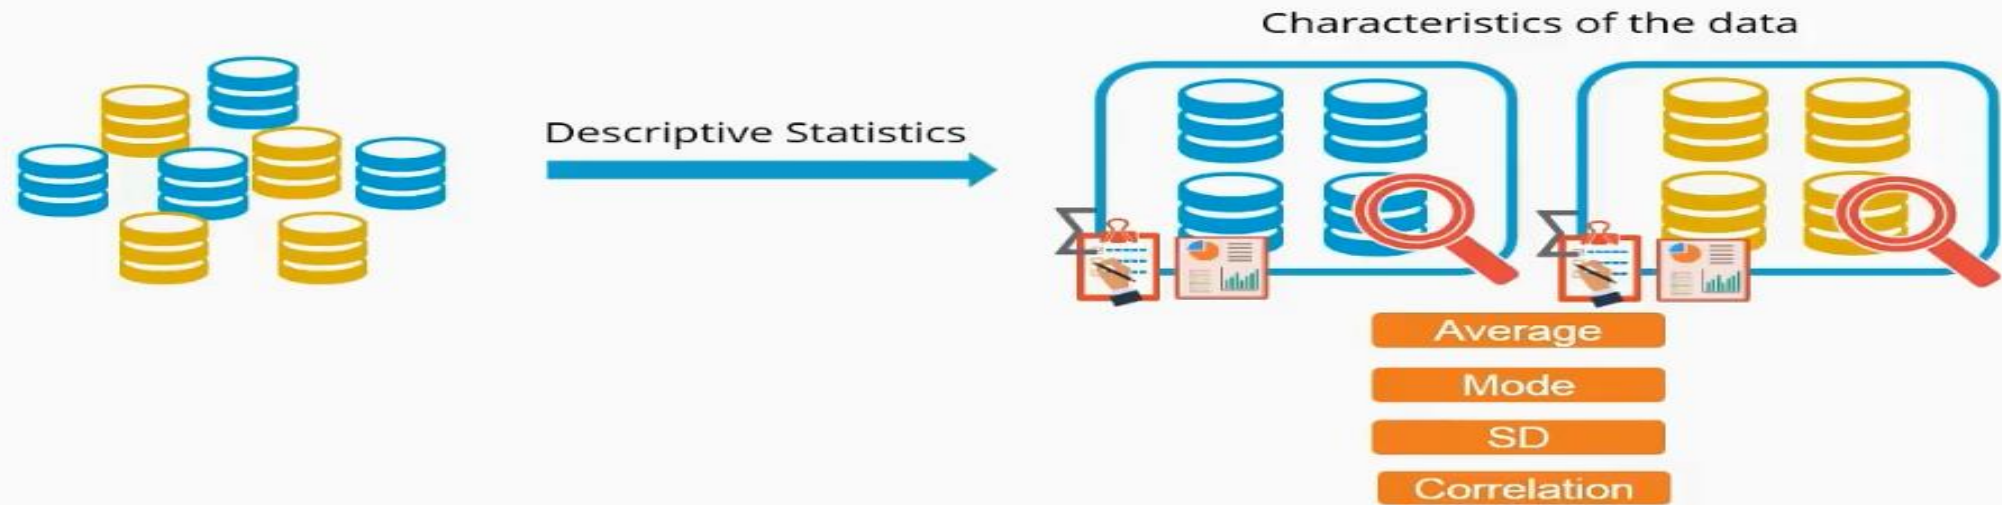

# Statistical Data Type According to variable type

Descriptive Statistics helps organize data and focuses on the main characteristics of the data. It provides a summary of the data numerically or graphically.

## Inferential Statistics

Modeling allows you to develop mathematical equations which describe the interrelationships between two or more variables.

## Statistical Terms

### Population

A population is the group from which data is to be collected.

**ALL**

Population

### Sample

A sample is a subset of a population.

**SELECTED**

Population

Sample

## Parameter

A descriptive measure of a *population*.

## Statistic

A descriptive measure of a *sample*.

Population

Parameter

Populations have Parameters,

Sample

Statistic

Samples have Statistics.

In the Descriptive Statistics method:

It allows one to infer population parameters based on sample statistics and to model relationships within the data.

In the Inferential Statistics method:

Inferential Statistics

# Statistical Inference...

**Statistical inference** is the *process* of making an estimate, prediction, or decision about a population based on a sample.

What can we *infer* about a Population's Parameters based on a Sample's Statistics?
